

**THE EMBODIMENTS OF THE INVENTION IN WHICH AN EXCLUSIVE
PROPERTY OR PRIVILEGE IS CLAIMED ARE DEFINED AS FOLLOWS:**

- 5 1. A method of controlling movement on the inside and around the outside of a facility,
comprising the steps of:
- providing each person within the facility with a transmitter which emits a unique
personality profile, embedded in the unique personality profile is an access level for that
person selected from multiple access levels;
- 10 providing each security door with a lock, a receiver and a controller, the receiver
receiving the unique access personality profile from the transmitter, the controller reviewing
the access level and unlocking the lock to the security door to permit access only when the
unique personality profile has an appropriate access level.
- 15 2. The method as defined in Claim 1, the transmitter being secured to the person with a
tamper-resistant band.
3. The method as defined in Claim 2, the controller initiating an alarm condition when the
tamper-resistant band is removed.
- 20 4. The method as defined in Claim 1, the controller initiating an alarm when the unique
personality profile of a person passing through the security door is not at the appropriate
access level.
- 25 5. The method as defined in Claim 1, the controller monitoring a perimeter loop, which
includes at least one of the security doors.
6. The method as defined in Claim 1, when the unique personality profile of the person is not
at the appropriate access level, the controller permitting such person access when
- 30 accompanied by an accompanying person with a unique personality profile that is at the

appropriate access level.

7. The method as defined in Claim 1, when there are some variable access security doors which are accessible to some access levels only when weather conditions are appropriate, the
5 controller receiving weather monitoring input and granting access to persons with such access levels only when weather conditions are appropriate.

8. The method as defined in Claim 4, the transmitter including a global positioning module system which remains dormant until activated by an alarm condition.
